PROFESSIONAL SUMMARY

Full-Stack Developer with 2+ years building production web and mobile applications on React, React Native, Node.js and PostgreSQL. Currently builds and ships modules for SYNC ERP — a multi-tenant pharmaceutical ERP running a 100-person field force across a React/Vite web client, a React Native (Expo) mobile app on Google Play and a PostgreSQL backend. Hands-on across the stack: REST API design, relational schema design, stored procedures and triggers, offline-first mobile sync and GPS geofencing. Strong command of JavaScript, SQL and Python, with a background in data analysis that carries into reporting and analytics work. Seeking a Full-Stack / MERN Developer role where ownership of both the client and the database layer delivers reliable, scalable products.

WORK EXPERIENCE

Full-Stack Developer | Medlife Pharmaceuticals — Lahore • Present

- Build and ship modules for SYNC ERP across a React/Vite web application (deployed on Vercel) and a React Native/Expo mobile app published on Google Play, serving field and head-office users company-wide.
- Develop backend logic in PostgreSQL/PL-pgSQL — stored functions exposed as REST endpoints, triggers that enforce business rules on write, and materialised views that keep dashboard queries under ~110 ms.
- Implement offline-first attendance and call-punch flows using on-device SQLite queues with background sync, plus GPS geofencing (100 m radius validation) via expo-location and expo-task-manager.
- Design multi-tenant data isolation — company-scoped tables with composite unique keys and foreign keys — so one deployment serves multiple companies without data crossover.
- Build reporting and analytics modules: hierarchy-aware sales aggregation, target-versus-achievement tracking, ROI dashboards and Excel (.xlsx) exports.
- Automate data ingestion in Python (pandas) on GitHub Actions, normalising mixed-format files from ~34 distributors and reconciling totals before insert.

- Integrate Firebase Cloud Messaging push notifications and manage release builds through Expo EAS pipelines.

Full-Stack Web Developer (Remote) | Ezitech Software Company — Rawalpindi

- Built responsive, cross-browser interfaces with JavaScript, HTML5, CSS3 and jQuery, delivering consistent UI/UX across desktop, tablet and mobile.
- Developed and customised client-specific features on PHP/MySQL backends, from database queries through to front-end delivery.
- Integrated third-party REST APIs and collaborated with design and SEO teams to implement performance and usability improvements.

Data Analyst | Masood Textile Mills (MTM) — Faisalabad

- Analysed and processed large operational datasets, transforming raw records into structured, actionable reports for management.
- Maintained data accuracy and integrity across systems, supporting reporting and process-improvement initiatives.

PROJECTS

SYNC ERP — Multi-Tenant Pharmaceutical ERP (React, Vite, PostgreSQL, Supabase)

- Web ERP in production covering Finance (1,398-account chart of accounts, general ledger, journal vouchers, trial balance, P&L), HR (attendance, leave, salary increments), Field Force (doctor and territory assignment, daily call reports, expense claims) and Distribution (distributor sales, targets, ROI analytics).
- Backend built on PostgreSQL: company-scoped multi-tenancy across 119 tables, business logic in PL/pgSQL functions consumed as REST RPCs, triggers enforcing data invariants, and role-based screen permissions driven from data rather than hardcoded.

SYNC Field Force App (React Native, Expo, SQLite) — live on Google Play

- Offline-first mobile app for field staff: shift-window attendance marking, GPS-geofenced doctor call punching, expense submission, weekly planning and push notifications.
- On-device SQLite queue drains to PostgreSQL on reconnect, with timezone-correct timestamps and duplicate-safe sync.

Paws.pk (MERN Stack)

- Pet care and accessories e-commerce platform with product listings, cart and a streamlined checkout experience.

Trav-Ease.pk (MERN Stack)

- Travel management platform for planning and booking trips across northern Pakistan, with a clean, intuitive interface.

TECHNICAL SKILLS

Frontend: React, React Native (Expo), JavaScript (ES6+), JSX, HTML5, CSS3, jQuery, Responsive Design, Figma

Backend: Node.js, Express.js, PHP, REST API Design, PL/pgSQL, Stored Procedures & Triggers

Databases: PostgreSQL, MySQL, MongoDB, SQLite — schema design, indexing, query optimisation, row-level security

Platforms & Tools: Supabase, Vercel, Expo EAS, Git & GitHub, GitHub Actions (CI/CD), Firebase Cloud Messaging

Data & Analytics: Python (pandas), SQL analytics, Excel, Data Analysis & Visualisation, Google Analytics

EDUCATION

B.S. in Computer Science — COMSATS University Islamabad

A-Levels (Physics, Mathematics) — Lahore Grammar School, Faisalabad

O-Levels (Sciences) — Lahore Grammar School, Faisalabad

CERTIFICATIONS

- WordPress Development — DigiSkills.pk
- Digital Marketing — DigiSkills.pk
